

CLEANING & MAINTENANCE INSTRUCTIONS

Cleaning of Glass

- Always protect product from contaminating substances.
- Do not allow foreign substances to remain on surface of glass.
- In general the glass surfaces should be cleaned on a regular basis. The level of pollution or contaminants in the surrounding area determines the frequency.
- Glass should be cleaned using soft clean cloths, chamois leathers, sponges, or soft paper.
- Use clean warm water with a mild liquid detergent. Proprietary glass cleaners may also be used.
- Do not use detergents that contain either alkaline, acids or fluoride.
- Abrasive cleaning methods i.e. scouring pads, steel wool, and razor blades should only be used for spot cleaning, as damage to the surface may result.
*Note: **Never** use abrasives on the filmed side of KERALITE FR-F.*
- It is not recommended to clean the whole surface of the glass with a blade or squeegee.

These instructions apply to all special glass products supplied by Vetrotech Saint-Gobain.
